

I am a full stack web developer with a passion in programming. I am a student at Washinton University in Saint Louis completing a certificate in full stack development. My goal is to continue improving and expanding my knowledge. Having learned skills such as JavaScript, HTML, CSS, React, Node, Express, MySQL etc. my projects showcase my strength as a coder and the willingness to push boundaries. I am equally capable of being a reliable team member and fast learner. My aim remains to continue learning the world of web development while leveraging my productivity and skills to be considered a strong asset to any organization.

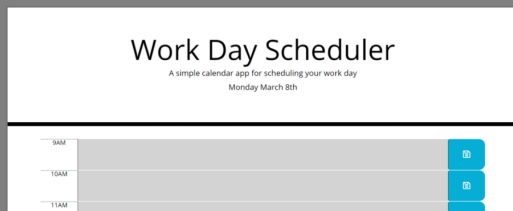

A few of my latest projects...

Horoscope Finder

With a new horoscope generated each day, this project gives the user daily affirmation in the form of a quote and daily advice. This project uses API calls and CSS animations.

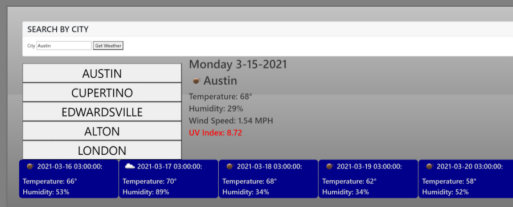

[Check it out on Github!](#)

Work Day Scheduler

This project displays a schedule during regular business hours. This project uses local storage and Moment.js to save the user's input to put on display when they close or refresh their browser.

[Check it out on Github!](#)

Weather Forecast

This project allows the user to search for the weather conditions by typing a city within an input response. Weather Forecast utilizes the OpenWeather API to generate today's weather, as well as a five day forecast.
